## Abstracts

Solder Reclaim Service refers to a service that recycles waste solder and dross generated during soldering operations using specific processes and procedures, transforming them into usable materials again. Materials accepted for recycling typically include pot metal, dross/skimming, solder paste, circuit boards, anodes and anode waste, wiping cloths, and other tin-containing materials. Solder recycling services not only help companies reduce hazardous waste generation and comply with environmental regulations, but also save costs and achieve resource recycling by recovering valuable metals from the waste. With the continuous expansion of the electronics manufacturing industry, there's a growing demand for efficient and sustainable practices, including the recycling and reclaiming of solder materials used in production processes. Companies are increasingly focused on environmental sustainability and reducing waste. Solder reclaim services align with these objectives by recovering valuable materials, minimizing waste, and reducing the environmental impact of manufacturing processes. Reclaiming solder materials offers cost savings by reusing valuable metals such as tin, lead, and other alloys. It reduces the need for raw materials and mitigates the impact of price fluctuations in metal markets.

The global Solder Reclaim Service market size was estimated at USD 322.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
