Report Overview:

Solder Resist Ink (Solder mask) is a lacquer-like layer of polymer that provides a permanent protective coating for the copper traces of a printed circuit board (PCB) and prevents solder from bridging between conductors, thereby preventing short circuits. And also, the biggest advantage you get with solder mask is that soldering gets much easier, as solder doesn't spread everywhere and gets confined to the pads, making things much easier and reliable. Created primarily to facilitate wave soldering, it was well used in mass assembly. Green is its traditional color but now many colors are available.

The Global Solder Resist Ink Market Size was estimated at USD 672.28 million in 2023 and is projected to reach USD 975.44 million by 2029, exhibiting a CAGR of 6.40% during the forecast period.
