## Abstracts

Soldering robot is a machine to finish Soldering. Soldering is a process in which two or more items (usually metal) are joined together by melting and putting a filler metal (solder) into the joint, the filler metal having a lower melting point than the adjoining metal. Soldering differs from welding in that soldering does not involve melting the work pieces. In brazing, the filler metal melts at a higher temperature, but the work piece metal does not melt. In the past, nearly all solders contained lead, but environmental and health concerns have increasingly dictated use of lead-free alloys for electronics and plumbing purposes. Japan is the largest Soldering Robot market with about 46% market share. China is follower, accounting for about 40% market share. The key players are Japan Unix, Quick, Apollo Seiko, Tsutsumi Electric, HAKKO, Janome, Cosmic, Unitechnologies, Flex Robot etc. Top 5 companies occupied about 47% market share.

The global Soldering Robot market size was estimated at USD 224.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
