Report Overview:

Soldering robot is a machine to finish Soldering. Soldering is a process in which two or more items (usually metal) are joined together by melting and putting a filler metal (solder) into the joint, the filler metal having a lower melting point than the adjoining metal. Soldering differs from welding in that soldering does not involve melting the work pieces. In brazing, the filler metal melts at a higher temperature, but the work piece metal does not melt. In the past, nearly all solders contained lead, but environmental and health concerns have increasingly dictated use of lead-free alloys for electronics and plumbing purposes.

The Global Soldering Robotics Market Size was estimated at USD 214.27 million in 2023 and is projected to reach USD 297.12 million by 2029, exhibiting a CAGR of 5.60% during the forecast period.
