Abstracts

A Solenoid Valve is an electromechanically operated valve. Solenoid Valve is used to control the fluid automatic based components, belonging to the actuator; the valve is controlled by an electric current through a solenoid: in the case of a two-port valve the flow is switched on or off; in the case of a three-port valve, the outflow is switched between the two outlet ports. Multiple Solenoid Valves can be placed together on a manifold. Solenoid Valves are the most frequently used control elements in fluidics. Their tasks are to shut off, release, dose, distribute or mix fluids. They are found in many application areas. Solenoids offer fast and safe switching, high reliability, long service life, good medium compatibility of the materials used, low control power and compact design. Global Solenoid Valves key players include ASCO, Kendrion, Danfoss, Parker, B?rkert, etc. Global top five manufacturers hold a share about 35%. Asia-Pacific is the largest market, with a share about 35%, followed by North America and Europe, both with a share about 30 percent. In terms of product, Direct-acting Type is the largest segment, with a share about 45%. And in terms of application, the largest application is Home Appliance, followed by Automobile, Automation, General Industry, etc.

The global Solenoid Valves market size was estimated at USD 4862.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
