### Report Overview

Masterbatch is a concentrated mixture of pigments and/or additives encapsulated during a heat process into a carrier resin which is then cooled and cut into a granular shape. Masterbatch allows the processor to colour raw polymer economically during the plastics manufacturing process. Masterbatch (MB) is a solid additive for plastic used for coloring plastics (color masterbatch) or imparting other properties to plastics (additive masterbatch). Solid Additive Masterbatches are concentrated solid forms of additives used in the plastics industry to enhance the properties of plastic materials during processing. These masterbatches consist of a high proportion of additives, such as colorants, UV stabilizers, antioxidants, and flame retardants, uniformly dispersed in a carrier resin. They are added to the base polymer to achieve desired qualities like color, durability, UV protection, and more, while simplifying the production process and ensuring consistent additive dispersion.
