Report Overview

A solid booster is a rocket thruster that is strapped to an aerospace vehicle to provide additional thrust. Solid boosters are used on the Ariane V, the Dyna-Sky V and the US Space Shuttle. The solid thrusters used on the Shuttle are the most powerful of these thrusters. The advantage of solid thrusters over liquid thrusters is that they have a higher thrust capacity and do not require cooling and insulating equipment. The use of solid thrusters for liquid rocket core stages reduces the use of liquid fuel and reduces the overall weight of the rocket.
