Solid carbid pilot drills are widely used in metal processing, aerospace, automotive manufacturing and mold manufacturing. It is made of high-strength and wear-resistant carbide material, and the entire tool is an integrated design, ensuring excellent strength and durability. Solid carbide spot drills can work at higher cutting speeds and feed rates, providing longer service life and higher machining accuracy. Carbide materials usually contain tungsten carbide and cobalt, and are manufactured through a precision sintering process to withstand extreme working conditions. Many solid carbide spot drills are also coated, such as TiN (titanium nitride), TiAlN (titanium aluminum nitride), etc., which further improve the surface hardness and lubrication properties, and reduce friction heat and wear.
