The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Solid Control Screw Conveyor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Solid Control Screw Conveyor is one of the key equipment in the solid control system. It is mainly used to transport and separate the solid phases (such as drill cuttings, sand particles, etc.) in the drilling fluid during the process of oil drilling. Its working principle is to push the solid phases in the drilling fluid along the conveyor pipeline by the rotating spiral blades, thereby achieving the separation of solid phases from the liquid phase. It can be widely applied in oil drilling, shale gas extraction, and environmental protection fields, and plays an important role especially in the treatment of drilling fluid waste and the transportation of drill cuttings.

The global Solid Control Screw Conveyor market size was estimated at USD 352.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
