Abstracts

A solid corrosion inhibitor is a chemical substance formulated in a solid or semi-solid physical state, such as powders, pellets, tablets, or blocks, designed to protect metallic surfaces from degradation caused by chemical or electrochemical reactions with their environment, primarily by forming a protective layer or altering the electrochemical conditions at the metal interface to slow or prevent oxidation, rust, and other forms of corrosion; these inhibitors are distinguished from liquid or vapor-phase inhibitors by their ease of handling, controlled release properties, suitability for enclosed or hard-to-reach systems, and reduced volatility, making them particularly applicable in industries such as oil and gas, water treatment, manufacturing, marine, and infrastructure, where they are used to safeguard pipelines, boilers, storage tanks, machinery components, and metal structures in both operational and storage phases.

The global Solid Corrosion Inhibitor market size was estimated at USD 1285.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
