Abstracts

A solid electrical contact rivet is a type of electrical contact component made from highly conductive and durable materials, such as silver, copper, or their alloys, used in electrical switches, relays, circuit breakers, and contactors. These rivets serve as critical connection points in electrical circuits, facilitating efficient current transmission while withstanding mechanical wear, electrical arcing, and high temperatures. Unlike composite or bimetallic rivets, solid electrical contact rivets consist of a single material throughout, ensuring uniform conductivity and mechanical strength. Their structure provides excellent resistance to oxidation, corrosion, and electrical erosion, making them suitable for applications requiring high reliability and long service life.

The global Solid Electrical Contact Rivet market size was estimated at USD 724.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
