Abstracts

Solid insulated switchgear (SIS) represents an advanced category of medium-voltage electrical distribution equipment in which all primary active components, including circuit breakers, disconnectors, and earthing switches, are fully enclosed within solid insulation materials such as epoxy resin or thermoplastic compounds, eliminating the need for sulfur hexafluoride (SF6) gas or air insulation. This design enhances operational safety by preventing accidental contact with live parts, reduces the physical footprint of installations due to its compact modular construction, and offers superior environmental benefits by avoiding the use of potent greenhouse gases. SIS systems are engineered for high reliability, minimal maintenance, and extended service life, making them particularly suitable for applications in urban grids, renewable energy integration, data centers, industrial complexes, and other settings where space constraints, safety regulations, and sustainability goals are critical considerations.

The global Solid Insulated Switchgear market size was estimated at USD 1200.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.15% during the forecast period.
