Abstracts

Solid photosensitive resin plate is a pre-coated plate, mainly composed of a covering film, a photosensitive resin layer, an adhesive layer and a plate base. The plate base materials are diverse, including steel plates, aluminum plates, polyphenol bases, etc. In the platemaking process, the solid photosensitive resin plate is exposed using a negative base. The illuminated part will undergo photopolymerization or photocrosslinking reaction to form a solid network structure, which is insoluble in the developer; while the unexposed part is soluble in the developer, and after washing, a relief image can be obtained. Solid photosensitive resin plates are widely used in high-quality printing fields such as commodity packaging, trademark plates, and wireframe plates. Due to its short platemaking cycle, simple operation, and high resolution, it can meet the needs of fast and high-quality printing.

The global Solid Photosensitive Resin Plate market size was estimated at USD 216.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
