Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Solid Polysulfide Rubber competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Solid Polysulfide Rubber (SPR) is a synthetic elastomer derived from liquid polysulfides that is characterized by excellent resistance to fuels, oils, solvents, ozone, and weathering, along with strong impermeability to gases, making it widely used in sealants, gaskets, adhesives, protective coatings, and specialty rubber products. Its supply chain begins with petrochemical-based raw materials such as sodium polysulfide and organic dichlorides, which are polymerized into liquid polysulfides and then cured or compounded with fillers, plasticizers, and stabilizers to form solid rubber grades. Production is concentrated among specialized chemical and rubber manufacturers, which supply to downstream sectors including aerospace, automotive, construction, marine, and electronics, where the material is valued for durability in harsh environments and long service life. The global Solid Polysulfide Rubber market produces about 1,300 kilotons annually, supported by a capacity of nearly 1,500 kilotons per year. The industry maintains an average profit margin of around 30%, with prices ranging from USD 4,200 to 7,800 per ton depending on the grade.

The global Solid Polysulfide Rubber market size was estimated at USD 6232.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
