Abstracts

The solid-state battery coating machine is the core equipment used to manufacture solid-state batteries. It is mainly responsible for uniformly coating electrode active materials and solid electrolytes on the surface of the substrate to form a thin and uniform electrode layer. Compared with the traditional liquid battery coater, its process is more complicated and needs to adapt to the high viscosity and low fluidity characteristics of the solid electrolyte, while ensuring the coating accuracy and interface bonding strength to meet the high energy density and high safety requirements of solid-state batteries.

The global Solid State Battery Coating Machine market size was estimated at USD 437.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 28.30% during the forecast period.
