Abstracts

A pilot line is an intermediate production setup that bridges the gap between lab-scale prototypes and full-scale manufacturing. In the context of solid-state batteries, these lines are designed to handle the unique challenges associated with solid electrolytes, such as material handling, layer uniformity, and interface stability. They typically encompass the entire battery fabrication process, including: Material Preparation: Mixing and processing of cathode, anode, and solid electrolyte materials. Electrode Fabrication: Coating, drying, and calendaring of electrode layers. Cell Assembly: Stacking or winding of electrode and electrolyte layers, followed by cell sealing. Formation and Testing: Initial charging cycles and performance evaluations to ensure quality and reliability. These pilot lines allow manufacturers to optimize production parameters, assess scalability, and produce sample cells for testing and validation purposes.

The global Solid-state Battery Pilot Line Service market size was estimated at USD 166.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 34.10% during the forecast period.
