Abstracts

Solid state lighting (SSL) refers to a type of lighting that uses light-emitting diodes (LEDs), organic light-emitting diodes (OLEDs), or polymer light-emitting diodes (PLEDs) as sources of illumination rather than electrical filaments, plasma, or gas. Unlike traditional lighting technologies, SSL operates on the principle of electroluminescence, where light is emitted from a solid object?a semiconductor?when an electric current passes through it. This technology offers significant advantages in energy efficiency, longevity, durability, and design flexibility, as it produces minimal heat, allows for precise control over color and brightness, and enables compact, versatile form factors. SSL is widely used in applications ranging from general illumination, automotive lighting, and displays to specialized uses in medical, architectural, and horticultural lighting, representing a fundamental shift from conventional lighting solutions toward more sustainable and adaptive systems.

The global Solid State Lighting (Ssl) market size was estimated at USD 45000.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
