Abstracts

Solid-state lithium batteries for embodied robots refer to solid-state lithium-based energy systems designed specifically to power embodied robotic platforms. By using solid electrolytes?such as sulfide, oxide, polymer, or composite materials?instead of conventional liquid electrolytes, these batteries significantly enhance safety, energy density, and cycle life. Compared with traditional lithium-ion batteries, solid-state solutions better support the demanding energy requirements of embodied robots, including continuous high-power joint actuation, complex motion execution, long-duration operation, and intensive on-device computing. With advantages in safety, lightweight design, high energy density, and superior temperature resilience, solid-state lithium batteries are emerging as a key power solution for next-generation embodied robots.Upstream includes key materials such as cathodes (high-nickel ternary, lithium-rich manganese-based, sulfide cathodes), anodes (lithium metal, silicon-based, modified graphite), solid electrolytes (sulfide, oxide, polymer, or composite), separators, and functional additives, as well as specialized manufacturing equipment for electrolyte preparation, electrode coating, cell stacking, and packaging. Midstream covers the production of solid-state battery cells?full, semi-, polymer, or composite types?and the integration into battery modules and packs with BMS, thermal management, high-rate discharge optimization, and lightweight design suitable for embodied robots.

Downstream focuses on embodied robotic platforms including humanoid, service, industrial, outdoor inspection, and bio-inspired robots, where these batteries support high-power joint actuation, complex dynamic movements, long-duration operation, intensive edge computing, and extreme environmental conditions. Extended support systems involve battery life management software, AI-driven energy optimization, motion and power control, fast-charging infrastructure, and safety certification frameworks, forming a complete ecosystem for solid-state lithium-powered embodied

robotics.

The global Solid-State Lithium Batteries for Embodied Robots market size was estimated at USD 54.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 36.50% during the forecast period.
