### Report Overview

Solid-State Marine Radar is a marine radar system based on solid-state transmission technology, using semiconductor transmitters (such as gallium nitride GaN or gallium arsenide GaAs) instead of traditional magnetrons. Compared with traditional pulse radar, solid-state radar has higher stability, lower maintenance requirements, higher resolution and faster target update rate. Its core advantages are that it can provide clear images, support multi-band operation and have stronger target recognition capabilities, making it suitable for a variety of marine environments, including bad weather and complex offshore channels.
