Abstracts

Solid State Photomultipliers (SSPMs), also known as silicon photomultipliers (SiPMs), are semiconductor-based photodetectors that operate by detecting and amplifying single photons through an array of avalanche photodiodes (APDs) operating in Geiger mode, offering high gain, low operating voltage, fast response times, and insensitivity to magnetic fields compared to traditional photomultiplier tubes (PMTs). These devices are characterized by their compact size, robustness, and ability to function in challenging environments, making them suitable for applications requiring precise light detection and photon counting, such as medical imaging (e.g., PET and CT scanners), high-energy physics experiments, LiDAR systems, radiation detection, and scientific instrumentation.

The global Solid State Photomultipliers market size was estimated at USD 25.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.25% during the forecast period.
