Abstracts

Solid-State Pulse Compression Radar is a radar system based on solid-state technology that uses pulse compression technology to improve detection resolution and target detection capabilities. Compared with traditional radars, this radar uses a solid-state transmitter, which has higher reliability and longer service life while consuming less energy. Pulse compression technology allows the radar to achieve higher range resolution at lower power by emitting longer pulses and compressing the echo signal when receiving, thereby accurately identifying and locating targets. The radar is capable of detecting smaller or farther targets in complex environments and is suitable for a variety of application scenarios such as air traffic control, maritime monitoring, weather observation and defense systems.

The global Solid State Pulse Compression Radar market size was estimated at USD 203.55 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 2.20% during the forecast period.
