## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Solid Stearamide Propyl Dimethylamine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Solid stearamide propyl dimethylamine is a fatty amide compound formed by the condensation reaction of stearic acid and dimethylaminopropylamine. It typically appears as a pale yellow to white waxy solid with a certain melting point and high purity. This substance is a weakly basic surfactant that can form a soluble quaternary ammonium salt under acidic conditions, exhibiting excellent emulsifying, conditioning, and antistatic properties. Solid products can be divided into pure solid and compound types, and are widely used in conditioners, hair masks, and other personal care products to improve hair smoothness and lubrication. The industrial chain of solid stearamide propyl dimethylamine mainly consists of three parts: upstream raw material supply, midstream synthesis and manufacturing, and downstream application fields. The upstream sector mainly includes chemical raw materials such as stearic acid (derived from the fractionation of vegetable oils or animal fats) and dimethylaminopropylamine (DMAPA). The midstream sector synthesizes solid stearamide propyl dimethylamine through amidation reactions, and further purifies, granulates, or co-melts it with fatty alcohols to form a solid conditioning matrix. Downstream applications are widespread in the personal care industry, particularly in daily chemical products such as conditioners, hair masks, shampoos, and skin lotions, where it is used as a conditioning agent, emulsifier, and antistatic active ingredient. The entire industry chain is affected by changes in chemical raw material prices, green synthesis processes, and the demand in the personal care market. In 2024, global production of solid stearamide propyl dimethylamine reached 48,082 tons, with an average selling price of US\$4.36/kg. The single-line capacity was 4,000 tons, and the

gross profit margin was 41%.

The global Solid Stearamide Propyl Dimethylamine market size was estimated at USD 210.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
