Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Solid Timber Decking competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Solid Timber Decking production reached approximately 302 million square meters, with an average global market price of around US\$ 28 per square meter. Solid Timber Decking refers to outdoor flooring or decking material made from solid, natural wood planks, typically used for constructing decks, patios, terraces, balconies, and other outdoor living spaces. These planks are not engineered or composite, but rather consist of single-piece solid timber, usually derived from hardwoods (e.g., Teak, Ipe, Merbau) or softwoods (e.g., Pine, Cedar, Spruce) that are durable, weather-resistant, and aesthetically natural. Solid timber decking offers a natural look, warmth, and texture, and is favored for its authentic wood appearance, though it generally requires regular maintenance such as sealing, staining, or oiling to resist rot, insects, and weathering.

The global Solid Timber Decking market size was estimated at USD 8450.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
