Abstracts

Solvent - based decorative inks are a type of ink that uses organic solvents or solvent - type polymeric film - formers as carriers to disperse pigments or dyes. They are mainly used for decorative printing on various substrates, such as paper, plastic, metal, and glass. These inks can provide vivid colors, high saturation, and good gloss, and have excellent adhesion to the substrate. The drying speed of solvent - based decorative inks is relatively fast, which is suitable for high - speed printing processes. However, due to the volatility of organic solvents, they may cause environmental pollution and have certain impacts on human health. Therefore, in recent years, with the improvement of environmental protection requirements, there has been a trend to develop low - solvent or environmentally friendly solvent - based decorative inks.

The global Solvent-Based Decorative Inks market size was estimated at USD 2415.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
