Abstracts

Solvent-based fluoropolymer coatings are coatings that incorporate fluoropolymers dissolved in a solvent, typically used to enhance surface properties such as chemical resistance, non-stick characteristics, weatherability, and thermal stability. These coatings are widely applied in industries like automotive, aerospace, electronics, and chemical processing for their superior performance in harsh conditions. Powder coatings lack solvents, giving way to negligible volatile organic compound (VOC) emission into the atmosphere and reducing the risk of combustion during their usage and storage process. In addition, the powder can be easily washed when exposed to human skin, which reduces the risk of health problems for operators. ETFE is excellent in processability and able to form a thick and non-stick film layer with electrical, mechanical and chemical strength. FEP and PFA Coating Powder are low in melt viscosity and excellent in melt fluidity which can give a coating free of pinholes.

The global Solvent-based Fluoropolymer Coating market size was estimated at USD 322.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
