Report Overview:

Solvent recovery is a form of waste reduction. In-process solvent recovery is widely used as an alternative to solvent replacement to reduce waste generation. It is attractive, like end-of-pipe pollution control, since it requires little change in existing processes. There is widespread commercial availability of solvent recovery equipment which is another attraction. Availability of equipment suitable for small operations, especially batch operations, make in-process recovery of solvents economically preferable to raw materials substitution. The solvent recovery systems are custom designed to optimize the recovery of solvents by combining condensers, receivers, vacuum pumps, and controls in a packaged system.

The Global Solvent Recovery Units (SRUs) Market Size was estimated at USD 1056.06 million in 2023 and is projected to reach USD 1196.31 million by 2029, exhibiting a CAGR of 2.10% during the forecast period.
