## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Soothing Face Mask competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Soothing face masks are a type of skin care product designed to improve skin sensitivity, redness, dryness and other discomforts. Its core function is to provide instant soothing and repair to the skin through a mild formula and special mask design. This type of mask usually contains soothing ingredients such as Centella asiatica, panthenol, allantoin, hyaluronic acid, supplemented with natural plant extracts (such as chamomile, aloe vera) or anti-allergic active substances, which can effectively reduce skin inflammation and relieve the burning and tightness caused by external stimuli (such as ultraviolet rays, pollution, and cosmetics). The mask cloth material is mostly made of skin-friendly and breathable Tencel, cotton or biofiber, which has a high fit and can carry a large amount of essence. It helps the ingredients penetrate through closed dressings, replenishes moisture to the skin, and rebuilds the skin barrier function. It is suitable for sensitive skin, post-operative skin or skin that is unstable due to environmental changes.

The global Soothing Face Mask market size was estimated at USD 248.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
