Report Overview

A Sound Barrier Fence is a structure designed to reduce noise pollution by blocking or absorbing sound waves from reaching a certain area. These fences are typically made of materials such as concrete, wood, metal, or composite materials, and are strategically placed between the noise source and the area requiring noise reduction. Sound Barrier Fences are commonly used along highways, railways, industrial sites, residential areas, and commercial properties to mitigate the impact of noise on the surrounding environment. The effectiveness of a Sound Barrier Fence is determined by factors such as height, thickness, material density, and the distance between the noise source and the fence.
