## Abstracts

Sovereign AI refers to a nation's capabilities to produce artificial intelligence using its own infrastructure, data, workforce and business networks. The sovereign AI industry chain can be broadly divided into three major segments: the upstream, comprising hardware and underlying infrastructure suppliers such as computing chips, servers, data centers, networks, and encryption security, ensures localized and autonomous model training and inference. The midstream includes sovereign AI platform developers, model providers, MLOps, and privacy-focused computing vendors, providing data management, algorithm training, and deployment environments compliant with local regulations. The downstream segment offers AI applications and services deployed locally or under specific regulations, targeting clients in sectors such as government, defense, finance, healthcare, and energy that place high demands on data sovereignty and privacy. The core of the entire supply chain lies in data localization, regulatory compliance, and the formation of an autonomous and controllable ecosystem, creating a closed loop from hardware to software and ultimately to application implementation.
