## Abstracts

Sovereign cloud refers to a cloud service that not only stores and manages data in accordance with the local laws and regulations of a specific country or region; it is also subject to access rights and operational policies under that same domestic legal framework. The sovereign cloud concept is gaining prominence given heightened national security and industrial competitiveness concerns. As global cloud services continue to expand, there are growing concerns that personal and confidential data could fall under the jurisdiction of foreign legal systems. To eliminate the influence of other countries' laws and regulations and to avoid data disclosure requests or surveillance carried out by overseas cloud providers under their own national laws, it is becoming essential for countries to ensure that data residency and operations are fully contained within their own borders. The sovereign cloud industry's supply chain can generally be divided into three main segments: the upstream segment primarily comprises providers of key hardware and underlying technologies, including chips, servers, storage devices, networking equipment, data center infrastructure, and security and encryption technologies. The midstream segment comprises suppliers of cloud operating systems, virtualization platforms, cloud management software, AI computing power, and data security solutions, responsible for providing a technology stack that ensures sovereign compliance, data localization, and independent control. The downstream segment provides customized cloud services and operational support to government, public utilities, critical infrastructure, and other industry clients with high data sovereignty requirements. The entire supply chain emphasizes independent control, security compliance, data localization, and cross-industry collaboration, forming a closed-loop ecosystem from hardware to software to services.

The global Sovereign Cloud market size was estimated at USD 244.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.50% during

the forecast period.
