Report Overview

Soxhlet extraction apparatus is a laboratory instrument used for the extraction of compounds from a solid sample. It consists of a round-bottom flask, a Soxhlet extractor, a condenser, and a siphon. The solid sample is placed in the Soxhlet extractor, and a solvent is added to the flask. The solvent is heated, causing it to evaporate and condense in the condenser, where it drips back down into the Soxhlet extractor. This process is repeated until the desired compound is extracted from the solid sample.
