Report Overview:

Soybeans remain the most efficient source of oil, and the animal industry continues to enjoy soybeans as a primary source of protein in the form of soybean meal — the by-product of oil extraction. Nevertheless, diets for young pigs and calves, and even broilers, cannot fully utilize normal soybean meal as it contains a plethora of anti-nutritional factors that are not completely eliminated. More concentrated forms of soybean protein are available, derived either from whole soybeans or from further processing of soybean meal. Soy protein concentrate (SPC) is the most common soy protein used in diets for young animals.

The Global Soy Protein For Animal Feed Market Size was estimated at USD 1134.37 million in 2023 and is projected to reach USD 1402.54 million by 2029, exhibiting a CAGR of 3.60% during the forecast period.
