The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Soybean Oil-based Printing Ink competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of soybean oil-based printing inks reached 980,000 tons, with an average selling price of \$2,850 per ton. Soybean oil-based printing inks, primarily based on refined soybean oil, are environmentally friendly inks with low volatile organic compounds (VOCs), excellent color performance, and recyclability. They are widely used in newspaper printing, packaging printing, labels, magazines, and commercial promotional materials. Upstream raw materials include refined soybean oil, pigments, resins (alkyd resins and phenolic-modified resins), and additives. Major suppliers include ADM, Cargill, Lubrizol, Evonik, and BASF. Downstream customers include packaging printers, publishing organizations, and food packaging companies. Global production capacity is approximately 1.15 million tons, with an average gross profit margin of approximately 22%. Packaging printing accounts for 45% of downstream consumption, publishing printing for 30%, and commercial promotional materials and labels for 25%. Upstream material costs include approximately 38% for soybean oil, 25% for pigments, and 20% for resins. Future development focuses on high-solids water-based inks, bio-based resin substitution, and the expansion of green packaging applications.

The global Soybean Oil-based Printing Ink market size was estimated at USD 2794.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
