Abstracts

Space photovoltaics refers to the technology and systems used to generate electrical power from sunlight for use in space applications, such as satellites, space stations, and spacecraft. These systems utilize highly efficient solar cells made from materials like gallium arsenide (GaAs) and multi-junction cells, which are capable of converting a higher percentage of sunlight into electricity compared to terrestrial solar panels. Space photovoltaics must withstand harsh conditions, including extreme temperatures, radiation, and microgravity. They are essential for providing reliable and sustainable power for various space missions, enabling continuous operation of onboard instruments, communication systems, and life-support systems in the vacuum of space.

The global Space Photovoltaics market size was estimated at USD 565.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.90% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Space Photovoltaics market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
