## Abstracts

Space qualified optocouplers are devices that electrically isolate the input and output ends through optical isolation. They basically act as an interface between two independent circuits with different voltage levels. This type of isolation device usually consists of a light-emitting diode (LED) and a photoresistor (such as a photodiode). The light signal emitted by the LED controls the resistance value of the photoresistor, thereby achieving isolation and signal transmission between the input and output ends.

The global Space Qualified Optocouplers market size was estimated at USD 52.1 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.30% during the forecast period.
