Abstracts

Spacecraft Decommissioning Service refers to the safe transfer of spacecraft (such as satellites, rocket upper stages, etc.) that have reached their design life, functional failure or collision risk from their original orbit to atmospheric incineration, graveyard orbit isolation or controlled re-entry into a designated area (such as uninhabited sea area) through ground command control, autonomous deorbit technology, robotic arm capture or laser ablation. At the same time, it combines space situational awareness data to assess collision risks, formulate avoidance strategies, and complete comprehensive technical and management activities such as orbital resource release and mission data archiving.
