Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on SPAD-SoC Chips competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. SPAD-SoC usually adopts "back-illuminated 3D stacking" technology to realize SPAD detectors and logic circuits on two wafers respectively, so the structure is divided into two layers: the upper layer is the single-photon pixel array (SPAD Pixel); the lower layer is the readout circuit (Readout circuit), which includes key modules such as high-precision digital time sampling module (TDC), single-photon ranging engine (TCSPC), dedicated digital signal processor (DSP), and lidar control center (MCU). The structure of SPAD-SoC is a highly integrated chip design. It integrates multiple functional modules such as SPAD array, signal processing circuit, storage unit and control logic on a single chip, realizing the whole process from photon detection to digital signal output. In the highly integrated SPAD-SoC solution, the whole process is digitalized, from the photon entering the lidar and being converted into an electrical signal, to the subsequent data processing, and then to the presentation of the point cloud. The fully digital architecture is recognized as the next generation lidar architecture. The integrated sensing, computing and storage chip makes the data transmission between modules not limited by the bandwidth and delay between discrete chips, which improves the performance and stability of the system, reduces the cost and power consumption, and can provide more efficient and reliable solutions for applications such as LiDAR. It should be noted that the SPAD-SoC chip mentioned in this study is different from the SiPM chip using CMOS technology.

The global SPAD-SoC Chips market size was estimated at USD 552.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 23.30% during

the forecast period.
