## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on SPAD ToF Depth Sensor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A single-photon avalanche diode (SPAD) is a pixel structure that uses the "avalanche multiplication" principle to multiply the electrons from a single incident photon, just like an avalanche in the real world. It can detect even weak incident light. By using this structure as a light-receiving element in a SPAD ToF depth sensor, long-range, high-precision distance measurement is possible. The sensor measures the distance to an object by detecting the flight time (time difference) from the time a signal is emitted from a light source to the time it is reflected by an object and returns to the image sensor.

The global SPAD ToF Depth Sensor market size was estimated at USD 750.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.40% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global SPAD ToF Depth Sensor market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
