## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Spandex for Warp-Knitting competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Spandex for Warp-Knitting is a type of spandex fiber used in warp knitted fabrics. Warp knitted spandex has heat resistance and low creep, is not easy to break even in high-speed weaving, and the fabric structure is uniform and stable. It gives the fabric excellent elasticity and the ability to stretch and recover its original shape, making it ideal for making garments that require high elasticity, such as yoga wear and swimwear. Spandex for Warp-Knitting is currently a very important type of elastic fiber in the textile industry, widely used in high-elasticity, comfort, and support fabrics such as sportswear, swimwear, and underwear. As consumers' demand for comfort, elasticity, and durability continues to increase, the market demand for warp-knitted spandex shows a steady growth trend. In terms of industry status, major producers such as Invista, Hyosung, and Asahi Kasei dominate the global spandex market. These companies have strong production capabilities and a wide product line, covering various specifications and functions of warp-knitted spandex products. With the increasing awareness of sustainability and environmental protection, consumers' attention to eco-friendly materials is gradually growing, which will drive the research and application of bio-based spandex and recycled material spandex.

The global Spandex for Warp-Knitting market size was estimated at USD 3084.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
