Report Overview:

A spark detector is a simple device which monitors the infrared light within the field of view of a special sensor which detects light in the infrared range. This light is emitted from all things which emanate heat, and sparks or burning embers emit a greater amount of infrared light in contrast to the surrounding area within a typical room, workshop or factory floor. Fire is also detectable by the spark detector, which means any deflagration event within the ductwork will be registered and abated by a properly designed fire extinguishment system.

The Global Spark Detector Device Market Size was estimated at USD 194.76 million in 2023 and is projected to reach USD 287.40 million by 2029, exhibiting a CAGR of 6.70% during the forecast period.
