Report Overview:

SPC (Stone Plastic Composite) flooring production line is a machinery system used in the manufacturing process of SPC flooring sheets. SPC flooring is a type of rigid core vinyl flooring that is designed to mimic the appearance of natural materials such as wood or stone. It is a popular flooring material due to its durability, waterproof properties, and low maintenance requirements.

The SPC flooring production line comprises several modules/machines that work together to produce SPC flooring sheets. The process starts with preparing PVC powder and other additives and mixing the materials using high-speed mixers. The mixed material is passed through an extruder that converts it into a thin sheet of flooring material.

The SPC flooring is then cooled and cut into the desired size using specialized cutting machines. The flooring is then subjected to heat treatment to ensure stability and durability.

The Global SPC Flooring Production Line Market Size was estimated at USD 124.28 million in 2023 and is projected to reach USD 161.84 million by 2029, exhibiting a CAGR of 4.50% during the forecast period.
