Report Overview

Special balloons are based on ordinary balloon catheters. Cutting pieces are added to the surface of the balloon or protrusions are made on the working surface of the balloon. When the balloon is filled and expanded, the pressure is focused and transmitted to the inner wall of the blood vessel with the help of the cutting pieces or protrusions protruding from the balloon surface, so as to achieve the purpose of cutting the blood vessel endothelium and dilating the narrowed blood vessels. The use of cutting pieces or protrusions in special balloons can obtain greater cutting force and a neater cutting surface, thereby more effectively dilating narrowed blood vessels, reducing irregular tearing of blood vessels, and reducing the risk of dissection.
