Abstracts

Comparing with spherical zinc powder, flake zinc powder has stronger covering power, floatability, shielding ability and metallic luster, so that in the anticorrosive paint prepared with flake zinc powder, the zinc powder is arranged in a sheet shape, and the parallel connection among the sheet is achieved, the contact pattern is surface contact, resulting in a dense coating and a long corrosion route, which not only greatly reduces the zinc consumption and coating thickness per unit area, but also greatly improves the shielding performance and corrosion resistance of the coating. For example, when zinc-rich primer is prepared with flake zinc powder, the amount of zinc powder is only one third of that of ordinary zinc-rich primer, and the corrosion resistance is comparable or better than that of spherical zinc powder rich zinc coating and resulting a sharp reduction in cost of zinc-rich coatings. Global key players of Special Flake Zinc Powder for Zinc-Rich Coatings include ECKART, Novamet, AVL METAL POWDERS, ShanDong Jie Han, etc. The top four players hold a share over 54%. In terms of product type, High Purity Zinc Powder is the largest segment, occupied for a share of 80%. In terms of application, Oil and Gas has a share about 24 percent.

The global Special Flake Zinc Powder for Zinc-Rich Coatings market size was estimated at USD 204.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
