Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Special Phenyl Silicone Rubber competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Special phenyl silicone rubber is a high-performance elastomer based on polysiloxane, modified by introducing phenyl (Phenyl) substituents into the molecular chain. It has excellent low-temperature flexibility, high-temperature resistance, radiation resistance and combustion resistance. The introduction of phenyl groups improves its stability in extreme temperature environments. It is particularly suitable for sealing, coating, insulation and other application scenarios that require high insulation and weather resistance in high-end fields such as aerospace, military industry, electronics and electrical, petrochemicals, etc. Compared with traditional silicone rubber, phenyl silicone rubber can still maintain good mechanical properties and dielectric properties in an environment of -100°C to +250°C.

The global Special Phenyl Silicone Rubber market size was estimated at USD 336.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
