Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Special Purpose Elevator competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Special Purpose Elevator (SPE) is defined as a non-standardized vertical conveyance system uniquely engineered and deployed to fulfill specific operational mandates, unusual functional requirements, or specialized environmental conditions within a structure. The distinctiveness of an SPE lies in its customization and specialization, setting it apart from conventional passenger or freight models. The entire lifecycle—from design to installation—must be meticulously tailored to its intended special mission. This bespoke approach dictates significant variances in technical specifications, including load capacity, acceleration profiles, operational speed, structural integrity, and safety protocols. For instance, a firefighter's elevator is structurally fortified with features like water protection and emergency power to ensure reliable function during a crisis, whereas an elevator in a laboratory might be designed for ultra-low vibration to transport sensitive equipment. Consequently, the development and deployment of an SPE are highly regulated, requiring compliance with specific industry codes and specialized safety standards beyond those applicable to general-use elevators. In 2024, global Special Purpose Elevator production reached approximately 80 K units, with an average global market price of around US\$ 40,000 per unit. According to data released by the National Bureau of Statistics, China's elevator production in 2022 was 1.455 million units, which was down 5.8% compared to last year. After years of development, China has become the world's largest elevator producer and consumer. More than 70% of the world's elevator manufacturing business were in Chinese mainland, and 60%-65% of the world's elevators sold in the Chinese market. According to data from the China Elevator Association, by the end of 2022, the number of elevators registered

in operation in China has reached 9.65 million, and more than 15,000 elevators have been installed after acceptance.

The global Special Purpose Elevator market size was estimated at USD 3200.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
