Report Overview

Different resin systems under the composition of high-frequency high-speed printed circuit boards with substrate materials have their specific properties, substrate materials used in the resin dielectric constant DK, dielectric loss Df is mainly affected by the resin molecular structure of the degree of polarisation itself. The greater the degree of polarisation, the higher the value of the dielectric constant, the greater the dielectric loss. Therefore, eliminating or reducing the easily polarised chemical structure of the resin can effectively reduce the DK and Df values of the substrate material. The following are introduced several kinds of resin materials with excellent dielectric properties, these resins have been in the high-frequency boards, high-speed boards in a large number of applications.
