Report Overview

Spectral Doppler is a medical imaging technology device used to visualize and analyze blood flow in the body. It involves using pulsed ultrasound to create a spectral display of how the speed of blood flow changes over time. By sending short pulses of ultrasound into blood vessels and measuring the frequency shift of the returning waves, spectral Doppler can provide detailed information about the speed and direction of blood flow. This technique is commonly used in fields such as cardiology, obstetrics, and vascular medicine to detect abnormalities in blood circulation.
