Abstracts

Spectroscopic reflectometry is a non-contact optical measurement technique that analyzes the intensity of reflected light across a broad spectrum of wavelengths to characterize thin-film properties such as thickness, refractive index, and extinction coefficient in semiconductor manufacturing, photovoltaics, optics, and display industries. It operates by directing broadband light onto a sample surface and measuring the interference patterns in the reflected signal, which are then modeled to extract precise film parameters critical for quality control, process monitoring, and research applications where nanometer-scale accuracy is required.

The global Spectroscopic Reflectometry market size was estimated at USD 125.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
