Abstracts

The upstream material of spherical aluminum nitride is mainly high-temperature alumina. The downstream material is mainly used in thermal pads, thermal gels, etc. The terminals are mainly high-end network communications and consumer electronics. In terms of price, it is higher than spherical alumina, about 144 usd/kg. Its advantage is excellent thermal conductivity and excellent thermal conductivity. When used in conjunction with spherical alumina, it can greatly improve the thermal conductivity of polymer composite materials. At present, the main methods for preparing spherical aluminum nitride powder are carbothermal reduction method, direct nitridation method, in-situ nitridation method, self-propagating high-temperature synthesis method, etc. However, there are high technical thresholds for achieving mass production and high output rates, so its processing costs are high and expensive, which also indirectly hinders its widespread application in thermal conductive materials.

The global Spherical Aluminum Nitride (AlN) market size was estimated at USD 63.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.50% during the forecast period.
