Report Overview

Spherical BN (Boron Nitride) Agglomerate refers to a specific form of boron nitride particles that are aggregated or clustered together to form spherical structures. Boron nitride is a synthetic ceramic material known for its unique combination of properties such as excellent thermal stability, high thermal conductivity, good electrical insulation, and low friction coefficient. Spherical agglomerates are created through a process where primary BN particles are fused or bonded together under controlled conditions to create larger, spherical-shaped particles. This form is particularly useful in applications where a uniform dispersion and consistent performance are required, such as in thermal interface materials, lubricants, coatings, and advanced ceramics.
